- Github || Bitbuckets|| Jira || Slack

Projects

Portfoli:

My portfolio website contains the latest projects that I made

-Link

E-Commerce-apps:

1-E-trade:

React.js – React redux – React router – React Query – Tailwind CSS – SCSS – MUI

Features:

- Login authentication and user accounts: Developed login system and user account management system using firebase, and used it to authenticate users before granting them access to protected routes, and allowing users to create and manage their own accounts, including adding products to their cart and wish list, , viewing their order history.

- Filter products based on criteria like price, and category, enabling users to quickly find and sort items of interest, search for a product, resulting in a 40% reduction in search time and improved overall user satisfaction.
- Ability for users to change the number of products per page
- Checkout form validation
- Created custom pagination & implemented single page product functionality.

- Developed an admin dashboard that allows administrators to manage the product catalog, add and remove products, and modify subcategories.

Admin Email: admin@etrade.com

Admin Password: Admin123456789
